Take urgent same-day action if suspecting type 1 diabetes (HbA1c may be normal).

HbA1c is accepted for the diagnosis of type 2

diabetes in the UK, but should not be used to diagnose type 1 diabetes or in the following contexts:

childhood, pregnancy, renal failure, haemoglobinopathy trait, anaemia, HIV, abnormal red cell turnover or any recent treatment likely to affect glycaemia or red cell turnover.

From 03/04/2023 HbA1c analysis is now performed by capillary electrophoresis.
